WORK EXPERIENCE

[Viamedia](#)
Senior Software Engineer

Lexington, Kentucky (Remote)
November 2024 – Present

- Architected the Linear TV plan-to-activation workflow in React 19/TypeScript, extracting budget, pricing, and spot-derivation logic into a framework-agnostic domain module backed by **270 unit tests**.
- Redesigned catalog data access from full-catalog client downloads to size-aware, zone-scoped batched queries with deduplication and staleness control, **eliminating ~500 sequential requests per session**.
- Designed and implemented a shared, embeddable chat widget as a **Shadow DOM Web Component** adopted across **3 products**, delivering a single **77 KB gzipped bundle** with style isolation, a themeable integration API, and resilient WebSocket communication with auto-reconnect and timeout recovery.
- Engineered a hexagon-based map layer for a **React/Redux geospatial platform**, implementing resolution-capping logic that **reduced requested map cells by up to 98%** across large regions and batch-loading that progressively rendered results without blocking on complete datasets.
- Contributed to backend functionality using Node.js/Express, implementing REST APIs, relational database workflows, and data models to support end-to-end product features.**

[AppDesk Services Pvt. Ltd.](#)
Software Development Engineer

Gurugram, Haryana
November 2021 – September 2024

- Built and shipped scalable web applications** using React, Remix, and Styled Components, developing reusable UI modules and contributing to application architecture.
- Optimized Remix application performance**, improving page load times by **30%** through frontend performance tuning, rendering optimizations, and efficient data-fetching patterns.
- Translated product requirements into production-ready UI modules**, collaborating with cross-functional teams to deliver features and **accelerate project completion by 15%**.
- Mentored 3+ new engineers** on frontend development, codebase conventions, and development workflows, helping reduce onboarding time and improve feature delivery.
- Conducted peer code reviews and technical knowledge-sharing sessions**, improving code quality, consistency, and maintainability across the team.

[Limetrax](#)
Associate Software Engineer

Gurugram, Haryana
August 2020 – July 2021

- Developed and shipped production web applications** using HTML, CSS, JavaScript, and React, building responsive interfaces with cross-browser compatibility and performance considerations.
- Collaborated with senior engineers and cross-functional team members** to develop and maintain features across live production applications.
- Introduced and integrated a testing framework** that improved code quality and **reduced production bugs by 20%**, establishing more reliable validation for application changes.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript
Frontend: React, Next.js, Remix.js, Redux, Tailwind CSS, Styled Components, Material UI, Framer Motion
Backend: Node.js, Express.js, Supabase, REST APIs
Databases: PostgreSQL (RLS, migrations), MongoDB
Cloud & DevOps: AWS (EC2, CloudWatch, Lambda), Vercel, Cloudflare R2 / S3, Docker
Core Concepts: Data Structures & Algorithms, REST APIs, Microservices & Multi-Tenant Architecture

EDUCATION

Year	Degree/Certificate	Institutions/Board,City
2020	B. Tech. (EEE)	Bharati Vidyapeeth's College Of Engineering
2016	XII	Bharatiya Vidya Bhavan, Delhi / CBSE, Delhi
2014	X	Bharatiya Vidya Bhavan, Delhi / CBSE, Delhi

PROJECTS

[Join The Jashn](#)

- **Built and launched a production-grade self-serve digital invitation platform from concept to paying customers**, designing a reusable theme system and interactive experiences with Next.js 16, React 19, TypeScript, Tailwind CSS, GSAP, Framer Motion, and Lenis.
- **Engineered a secure multi-tenant architecture** using PostgreSQL/RLS and Supabase, with guest authentication, Cloudflare R2 media storage, Razorpay payments, and serverless deployment on Vercel.
